The coaches had the 'varsity out yesterday for their last practice on the some grounds. The work was of short uration, the scrub lining up against the team for a few minutes in order to try out new formations. This practice lasted about five minutes, and then some signal work was had and the team stopped for the day.

The eleven will have a short signal spactice on Franklin Field to-day. Every member of the team is in condition to play his best game.

The line-up will be as follows: Whiting, left eard; Rodgers, left tackie; Gredy, left guard; Fretz, centre; Belking, captain and right guard; Farley, right tackie; Soule, right end; C. E. Smith, quarter-hack; Root, left half-hack; Birassburger, right halfback; Halsey, fullback.

It is learned that the same plan of bringing the midship frames right down outside the lead of the keel, as adopted in the case of Shamrock II., will e followed in the new challenger. William Fife considers stringing lead aliast inside the frame in this fashion races are as follows: ballast inside the frame in this fashion vermits the use of lighter frames than when the lead is bolted outside in the usual manner. In order to obviate the possibility of warping the steel frames by the heat of a large amount of molten lead the ballast will be run in quantities of about a ton daily.

The quantity of lead to be used is larger than that of any previous challengers, giving further proof that the new boat will have an exceptionally large displacement.

From the setting of the frames of the Shamrock III. It is apparent that another novelty is to be introduced. Instead of a level draught the whole length of the keel, the challenger will have a very decided drawing, considerably more aft than at the forward end of the lead.
